Amendment

Entry of the following amendment is respectfully requested. No new matter is added.

Amendment to the Specification

Kindly amend paragraph [0024] with the following amended paragraph:

[0024] Referring to FIG. 2, a spring may be further included. The spring is connected to the latch, additionally the spring may be attached to the lock mechanism. Including a spring such as an extension spring 230 biases the mechanism ~~in either a secured or~~ into a released orientation, when a securing device is removed. For instance, the extension spring 230 biases the latch and locking mechanism when in a released position. Utilizing a spring to bias the mechanism in a secured position requires the user to positively operate the mechanism, thus minimizing accidental opening of the chassis and/or release of a component.

Amendment to the Drawings:

The attached sheet of drawings includes changes to FIG. 2. The sheets encompassing FIG. 2, respectively, replaces the replacement sheet filed on February 7, 2005. FIG. 2 has been amended in the following respects: reference number 224 has been deleted.
